

**Create Next-Generation User Experience
for Requestors and Approvers with ID Management iBoT
from Perpetuuti's Plug-and-Play iBoT Store**

Request. Approve. Provision. As easy as a Conversation...

What does the ID Management iBoT do?

The smart ID Management iBoT or IDM iBoT can perform various activities such as creating the user, updating/mapping the user, enabling the app user, disabling/deactivating/deleting the app user, etc. in an efficient manner.

The smart ID Management iBoT or IDM iBoT searches any ITSM application for the service requests raised for creation/updation/enablement or disablement of the app user. If the IDM iBoT finds any such ticket, it automates these service requests in the configured IDM application by using the information provided in the ticket and closes the service request. The IDM iBoT also sends a confirmation email to the user after closing the service request.

How is Perpetuuti's IDM iBoT Unique in the Market?

The IDM iBoT from Perpetuuti redefines the user experience by intelligently automating the ID management tasks thereby removing the inefficiencies arising due to the manual processes...
